

Leveraging a Leadership Mentality

Workshops for people in leadership roles

This training helps leaders comprehend the psychological concepts that underlie interpersonal and organisational connections, enabling them to successfully and safely manage the effects of everyday obstacles.

Within the leveraging a leadership mentality programme, there are three separate workshops:

AUTHENTIC LEADERSHIP AND MOTIVATION STRATEGIES

The goal of this training is to strengthen your leadership mindset. You will discover more about your leadership style, behaviour, and practice. We spend time getting to know your team and discovering the assets and difficulties various personalities can bring to the table. Throughout the session, you will explore psychological theory as you explore tactics to build a high-performing, motivated team during the session.

INVESTING IN EMPLOYEE WELL-BEING

Our performance as leaders is determined by our teams. High-performing teams need members who trust one another, feel safe, and are empowered to take risks without fear of failure or judgement holding them back. This training focuses on the leadership abilities needed to build a safe atmosphere for your team's psychological well-being. It will assist you in creating strategies for having difficult conversations and creating a supportive team environment.

DEVELOPING AN AGILE LEADERSHIP STYLE

Growth mindset, communication, resiliency and catalyst behaviours are markers of leadership qualities for the 21st Century workplace. Leaders have needed to become more agile and open to experimentation in their strategies to manage and motivate staff under ever-changing circumstances. You will explore current change-maker models and examine how you can implement the theory of agile leadership into your leadership practice.
